

Collision Avoidance Systems for Mine Haul Trucks

By Patrick Glynn

VDM Verlag. Paperback. Book Condition: New. Paperback. 268 pages. Dimensions: 8.9in. x 5.9in. x 0.7in. A suite of new collision avoidance systems (CAS) is presented for use in heavy vehicles whose structure and size necessarily impede driver visibility is introduced. The main goal of the project is to determine the appropriate use of each of the commercially available technologies and, produce a low cost variant suitable for use in proximity detection on large mine haul trucks. The CAS 2 system used low cost Doppler radar antennae coupled to the CAS 1 monitor to indicate the presence of an object moving at any speed above 3 Km/h relative to the antennae. The novelty of the CAS 3 system lies in the design of 3 modules. The modules are 8 radar antennae (as used in CAS 2) modules located on the truck, software to interface with the end user and a display unit. Modularisation enables the components to be independently tested, evaluated and replaced when in use. The radar antennae modules and the system as a whole are described together with the empirical tests conducted and results obtained. The tests, drawing on Monte-Carlo simulation techniques, demonstrate both the correctness of the implementations and...

Reviews

Basically no words to describe. We have read through and I also am sure that I am going to go through once more once again later on. You may like just how the article writer composed this publication.

-- Mrs. Jane Quitzon DDS

Undoubtedly, this is actually the greatest job by any author. This can be for those who state there was not a worthy of studying. I am delighted to inform you that this is actually the greatest publication I actually have read within my very own daily life and could be the greatest book for ever.

-- Perry Reinger
